

## **Proposed blog topics 2018**

February

Potential impact based on size of gardens, relating this to other land use in the UK. If we would do everything right in our garden, would it have a regenerative effect? Tying in with #noplastic

March

Various principles and practices explained and key references. Highlighting what promises they make in terms of sustainability/ regeneration.

April

Soil biodiversity. An introduction into soil science in relation to gardening, design and landscaping.

March

The effect of soil health and common practices in soil management on plant health, growth and nutrient content.

April

Climate change – what is changing and how does it currently affect gardening practices and plants. What are future predictions?

May

What changes in our garden can help mitigate the effects of climate change?

June

What changes in our garden can help us cope with the climate fluctuations likely to become worse with climate change?

July

Plant biodiversity in our gardens. What is it like in gardens at the moment?

August

What would the effect be of a higher diversity of plants, and what plants should you choose for the highest regenerative impact.

September

Diversity of fauna in our garden. What is it like in gardens at the moment?

October

What can we do to stimulate more wildlife coming into our garden.

November

Carbon storage - how does it work and what can we do in our garden to increase carbon storage.

December

Ethical considerations when choosing landscaping products. Tie in with Christmas/ ethics.

January

Your health: how does the garden and gardening relate to personal (physical health)? Tie in with January boost of fitness and diet goals.
